🔍 Overview

This is a **Django-based web application** that serves as an Innovation Management Platform for Seha Virtual Hospital (مستشفى الصحة الافتراضي). It allows departments to submit challenges and initiatives, track them on an interactive workshop board, and view analytics through a dashboard.

✨ Features

Feature	Description
Dashboard	Analytics dashboard with charts showing submissions per department
Submissions	View all submitted challenges and initiatives
Workshop Board	Kanban-style board with Define → Ideate → Prototype stages
Excel Export	Export all submissions to an Excel (.xlsx) file
Power BI Page	Dedicated page for Power BI report embedding
Department Tracking	Track submissions across 14 hospital departments

---

🛠 Tech Stack

- **Backend:** Python 3.x, Django 6.0
- **Database:** SQLite3
- **Frontend:** HTML, CSS, JavaScript, Chart.js
- **Export:** openpyxl (Excel generation)
- **Data:** pandas, numpy

📦 Prerequisites

Before you begin, make sure you have the following installed on your system:

- **Python 3.10+** — Download Python
- **pip** — comes bundled with Python
- **Git** *(optional)* — for cloning the repository

To verify Python is installed, open a terminal and run:

```
python --version
```

🚀 Getting Started

1. Clone or Download the Project

```
# If using Git:
git clone <repository-url>
cd innovation-platform

# Or simply extract the project folder and navigate into it.
```

2. Create a Virtual Environment

```
python -m venv venv
```

3. Activate the Virtual Environment

Windows (PowerShell):

```
.\venv\Scripts\Activate.ps1
```

Windows (Command Prompt):

```
venv\Scripts\activate.bat
```

macOS / Linux:

```
source venv/bin/activate
```

4. Install Dependencies

```
pip install -r requirements.txt
```

5. Apply Database Migrations

```
python manage.py migrate
```

6. Create a Superuser *(Optional — for Admin panel access)*

```
python manage.py createsuperuser
```

Follow the prompts to set a username, email, and password.

▶️ Running the Project

Start the Django development server:

```
python manage.py runserver
```

The server will start at:

```
http://127.0.0.1:8000/
```

Open your browser and navigate to any of the available pages listed below.

🌐 Available Pages

URL	Page	Description
`/dashboard/`	Dashboard	Main analytics dashboard with department charts
`/submissions/`	Submissions	List of all challenges and initiatives
`/board/`	Workshop Board	Interactive Kanban board (Define → Ideate → Prototype)
`/excel/`	Excel Export	Downloads an Excel report of all submissions
`/powerbi/`	Power BI	Power BI report embedding page
`/admin/`	Admin Panel	Django admin interface (requires superuser)

```

⚠️ Notes

- The project uses **SQLite** by default, which requires no additional database setup.
- The `DEBUG = True` setting in `settings.py` is intended for development only. Set it to `False` before deploying to production.
- Make sure to keep the `SECRET_KEY` in `settings.py` private in production environments.
